Softstarters

PSR, PSRC, PSE and PSTX

Motors use almost one third of the world's generated electricity. So it is safe to say that reliable motor operation is crucial to our modern way of life.

ABB softstarters

How we are helping the industry

A softstarter from ABB offers you several values and benefits. Whether you are a consultant, OEM, panel builder or end-user, A softstarter will add to your business value by securing motor reliability, improving installation efficiency and increasing application productivity.

Secure motor reliability

Protection from electrical stress

ABB softstarters help increase your motors lifetime by protecting it from electrical stress. Starting currents are easily optimized to your load, application and motor size. Over ten motor protection features are included to keep your motor safe from different load and network irregularities.

Reduce installation time

Compact design and built in features

Reduce your installation time and panel size by having all features you need built into your softstarter. Our softstarters are easy to install thanks to their compact design and many built-in features. The built-in bypass saves energy and space while reducing heat generation. A complete motor starting solution in one unit.

Increase productivity

Ensures operation at full potential

Reduce the number of stops in your production by allowing your softstarter to do more than just starting. Our softstarters reduce the mechanical stress on your motor application, which will increase your uptime. Torque control, pump cleaning, motor brake and many other features enable you to operate your process at its full potential.

Common applications for softstarters

Pumps, fans, compressors and conveyors

A softstarter can do wonders with your operations. Packed with useful features, it reduces the wear of your equipment, improve the reliability of your processes and increase overall productivity.

01 Softstarters controlling pumps

02 Softstarters controlling fans

Pump

Eliminating water hammering with torque control

Water hammering is a common problem with pumps and typically results in wear in pipes and valves when starting and stopping the pump. The ABB softstarter feature torque control provides a soft pipe fill during start and eliminates water hammering during stop. The benefits are prolonged lifetime of the system and increased uptime.

Keep pipes and pumps clean

Many pumps risk getting clogged over time. This will cause reduced flow and increased risk of pump damage. Thanks to the feature to reverse the direction of the flow and start again with kick-start, ABB softstarters can help prevent and solve pump clogging and associated downtime.

Avoid running dry with underload protection

Damages due to pumps running dry can be avoided with the softstarter feature dry pump protection, called underload protection. It stops the motor which saves the pump from additional wear and contributes to prolonging its lifetime.

01

Fans

Soft starting adjusted to application

Fans normally have a high moment of inertia, which makes starting tough and current high. Using an ABB softstarter, the voltage is increased gradually during start, which reduces the current and removes the inrush peak. It is possible to adjust the settings to fit almost any starting condition, from unloaded to fully loaded.

Fast stops with motor braking

It can also take a long time to stop a fan. With the dynamic brake feature, also called flux braking, the stopping time can be reduced. This improves process safety when the load has a high moment of inertia and makes fan operation easier for the operator.

Avoid unwanted movements with stand still brake

An idle fan that is rotating backwards, due to wind or airflow from another fan, can be kept still using the stand still brake. It prevents unwanted airflow and improves the control of the system without the need for an external mechanical brake.

02

03 Softstarters
controlling compressors

04 Softstarters
controlling conveyor belts

Compressors

Full control of current with current limit

Many applications are sensitive to high or variable starting currents. The feature current limit makes it possible to start the motor securely even in a weaker network, improving the availability of the equipment and system. Reducing the current means reducing the stress on cables, network and motor.

Full voltage start for scroll compressors

For scroll compressors it is often necessary to start the motor in a very short time while still maintaining a low starting current. Full voltage start is a start mode that gives you almost a direct start but without the current peak.

Phase reversal protection for problem-free commissioning

A motor rotating in the wrong direction, which may occur due to connecting the phases wrongly, may cause severe damage to a compressor. Using phase reversal protection, the motor won't start in the wrong direction, avoiding costly compressor downtime and repairs.

03

Conveyors

Avoid overheating with overload protection

Too much material on a conveyor belt may cause overload and overheating, reducing the reliability and longevity of the motor. ABB's overload protection feature shuts down the motor in case of overload, avoiding overheating.

Increased flexibility with jog with slow speed

After stopping the belt, it may be necessary to run the motor at low speed to correctly position the belt before resuming operation. The jog with slow speed feature makes it possible to position the belt manually, in both forward and reverse direction, before re-starting the belt. This improves process efficiency and eliminates the need for a variable speed drive, a considerably more expensive solution for solving the problem.

Continuous operation with limp mode

Shorted thyristor is a possible problem for a softstarter, putting it out of operation until the component has been replaced. Using limp mode, the softstarter will continue to work with one thyristor shorted, avoiding costly unplanned stops.

04

Motor starting

Why motor starting and stopping matters

There are some common issues associated with starting and stopping electrical motors. Depending on requirement, different starting and stopping methods can be used.

Direct-on-line

Direct-on-line starting (DOL) is the easiest and most commonly used starting method. It is suitable for stable networks and mechanically stiff and well-dimensioned shaft systems due to the high current and torque generated during start. DOL starting is uncontrolled, which means that the motor will start with maximum current and torque regardless of load type.

Star-delta

A star-delta starter reduces current and torque during start. The starting current is about one third compared to direct-on-line starting, although it also reduces the starting torque to about 25 percent. Star-delta is not adjustable, so if the torque is reduced too much, the motor will not start. Current peaks will happen when switching from star to delta connection.

Typical torque and current curves from starting a motor

- Softstarter
- DOL
- Star-delta

Softstarter

Like direct-on-line and star delta starters, softstarters are used to start and stop motors in full-speed applications. It eliminates common problems associated with motor starting and stopping, including electrical surges, spikes and high inrush currents. Because it offers soft starting and stopping, a softstarter is the optimal compromise between a direct-on-line or star-delta starter and a variable speed drive in many full-speed motor applications.

Variable speed drive

Like a softstarter, a variable speed drive (VSD) can perform soft motor starting and stopping. However, the VSD was designed primarily to control motor speed, resulting in energy efficient motor operation in variable speed applications. Using a VSD with the sole purpose of ensuring soft starting and stopping of full-speed motors can therefore be considered an unnecessarily advanced solution.

Comparison between different starting methods

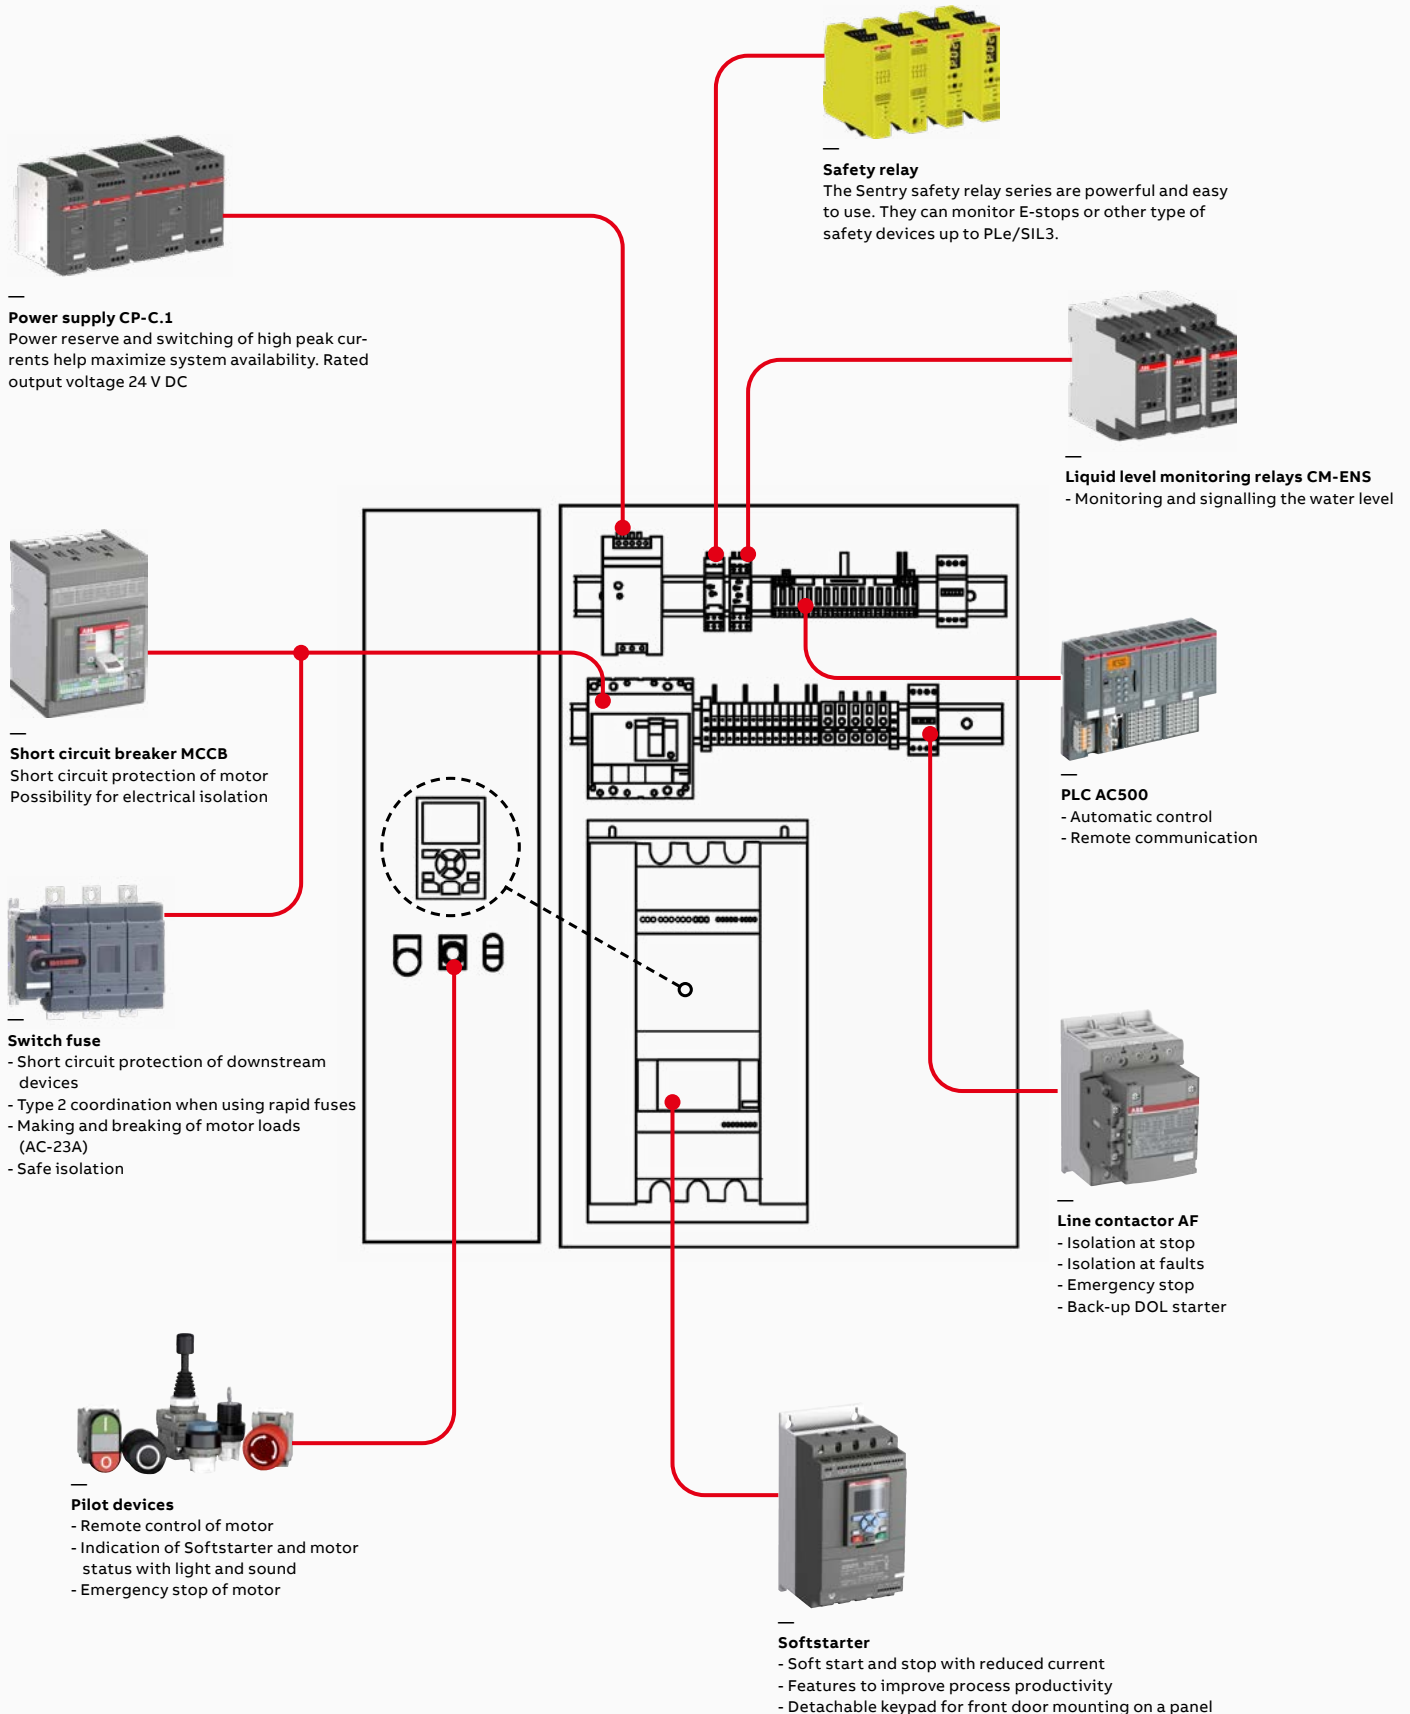

The table below describes which problems are prevented, using the most common starting methods.

| | Direct on line DOL | Star-delta start Y/D | Softstarter | Drive |
|--|-----------------------|-------------------------|-------------|-------|
| Reduce high inrush current | - | ● | ● | ● |
| Reduce heavy wear on bearings, shafts, gear boxes, etc | - | ○ | ● | ● |
| Prevent slipping belts | - | ○ | ● | ● |
| Remove torque/current peaks | - | - | ● | ● |
| Prevent water hammering in piping system | - | - | ● | ● |
| Need of variable speed control | - | - | - | ● |

Overview

Softstarters portfolio

Overview

PSR – The compact range

PSR is our most compact softstarter with basic benefits and values. PSR can handle up to 100 starts per hour. Suitable for small motors.

Current: 3 A... 105 A

Main voltage: 208 V... 600 V

Application features

PSRC – For scroll compressor

PSRC is fast and easy to install with fixed settings. Designed for scroll compressors results in less stress on the compressor reducing the maintenance cost to a minimum.

Current: 3 A... 105 A

Main voltage: 208 V... 600 V

Application features

PSE – The efficient range

The new generation PSE is a true general purpose softstarter. It's a perfect balance between high starting capacity and cost efficiency. Now featuring built-in fieldbus communication.

Current: 18 A... 370 A

Main voltage: 208 V... 600 V

Application features

PSTX – The advanced range

PSTX is the most complete alternative for any motor starting application. Featuring built-in modbus and anybus modules that support all major communication protocols.

Current: 30 A... 1250 A

Main voltage: 208 V... 690 V

Application features

Softstarters selection

ABB softstarters offering consists of four ranges, covering every need. The products help you secure motor reliability, improve installation efficiency and increase application productivity.

| Product range overview | PSR | PSRC | PSE | PSTX |
|-------------------------|---------------------|---------------------|----------------------|----------------------|
| Technology | Basic | Basic | General | Advanced |
| Motor size | Small – up to 105 A | Small – up to 105 A | Medium – up to 370 A | Large – up to 1250 A |
| Installation efficiency | Basic | Basic | Medium | High |
| Motor protection | - | - | Medium | High |
| Application | All | Scroll compressor | All | All |
| Application enhancement | Basic | Basic | Medium | High |
| Fieldbus Communication | Yes | Yes | Yes | Yes |
| Anybus Communication | - | - | - | Yes |
| Torque control | - | - | Yes | Yes |
| Heavy duty starts | - | - | Yes | Yes |
| Frame sizes | A, B, C, D | A, B, C, D | A, B, C | A, B, C, D, E, F |

Selection process

1 Determine softstarter series
 First, determine the softstarter series that fulfill the needs of the application and motor. Use the guide on the left to explore the three series and the power range each one covers.

2 Match the softstarter size with the motor current
 When the softstarter series is selected, the correct size should now be determined. The selection of a softstarter is based on the current. Find the softstarter that corresponds to the motor current.

3 Fine tune and select the correct size
 The last step is to fine tune the selection, and there are three different factors to consider:

- Normal or a heavy load: If the load is characterized as a heavy load, select the next size softstarter in the series.
- High ambient temperature
- High altitude

Use the equations and the table on the right to find the correct de-rating equation.

| Altitude formula |
|---|
| De-rate for altitudes between 1000-4000 m or 3280-13123 ft with the following equations for all softstarters: |
| In meters: % of Ie = 100 – (x-1000)/150 |
| In feet: % of FLA = 100 – (y-3280)/480 |
| Where x/y is the actual altitude in m/ft |

| Temperature equations |
|--|
| PSTX and PSR In Celsius: 40...60 °C: Reduce Ie with 0.8%/°C |
| PSTX and PSR In Fahrenheit: 104...140 °F: Reduce FLA with 0.44%/°F |
| PSE In Celsius: 40...60 °C: Reduce Ie with 0.6%/°C |
| PSE In Fahrenheit: 104...140 °F: Reduce FLA with 0.33%/°F |

| Typical applications | |
|-----------------------|----------------------|
| Normal duty start | Heavy duty |
| Bow thrusters | Centrifugal fan |
| Centrifugal pump | Conveyor belt (long) |
| Compressors | Crusher |
| Conveyor belt (short) | Stirrer |
| Elevator | Sawmill |

Softstarters benefits and features

SECURE MOTOR RELIABILITY

Increase your motors lifetime...

With ABB softstarters, starting currents are easily optimized to your load, application and motor size.

...by protecting it from electrical stresses.

Over ten motor protection features are included to keep your motor safe from overloads and network irregularities.

| Softstarter features | PSR | PSE | PSTX |
|---|-----|-----|------|
| Current limit | - | ● | ● |
| Current limit ramp and dual current limit | - | - | ● |
| Electronic motor overload protection | - | ● | ● |
| Dual overload protection | - | - | ● |
| Underload protection | - | ● | ● |
| Power factor underload protection | - | - | ● |
| Locked rotor protection | - | ● | ● |
| Current/Voltage imbalance protection | - | - | ● |
| Phase reversal protection | - | - | ● |
| User defined protection | - | - | ● |
| Motor heating | - | - | ● |
| PTC/PT100 input for motor protection | - | - | ● |
| Overvoltage/undervoltage protection | - | - | ● |
| Earth-fault protection | - | - | ● |

● = standard, ○ = option, - = not available

IMPROVE INSTALLATION EFFICIENCY

Reduce your installation time and panel size...

ABB softstarters are easy to install thanks to their compact design and many built-in features.

...by having everything that you need built in.

Built-in bypass saves energy and space while reducing heat generation: a complete motor starting solution in one unit designed and verified by ABB.

| Softstarter features | PSR | PSE | PSTX |
|----------------------------------|-----|-----|------|
| Built-in bypass | ● | ● | ● |
| Inside-delta connection possible | - | - | ● |
| Graphical display and keypad | - | ● | ● |
| Detachable keypad | - | - | ● |
| Motor runtime and start count | - | - | ● |
| Programmable warning functions | - | - | ● |
| Diagnostics | - | - | ● |
| Overload time-to-trip | - | - | ● |
| Overload time-to-cool | - | - | ● |
| Analog output | - | ● | ● |
| Fieldbus communication | ○ | ● | ● |
| Event log | - | ○ | ● |
| Multiple languages | - | - | 17 |
| Electricity metering | - | - | ● |

● = standard, ○ = option, - = not available

INCREASE APPLICATION PRODUCTIVITY

Reduce the number of production stops...

ABB softstarters reduce mechanical stress on your application which increases uptime.

...by letting the softstarter do more than just starting.

Torque control, pump cleaning, motor break and many more features enables you to use your process to its full potential.

| Softstarter features | PSR | PSE | PSTX |
|--------------------------------------|-----|-----|------|
| Torque control | - | ● | ● |
| Torque limit | - | - | ● |
| Coated PCBA | - | ● | ● |
| Limp mode | - | - | ● |
| Jog with slow speed forward/ reverse | - | - | ● |
| Dynamic brake | - | - | ● |
| Stand still brake | - | - | ● |
| Sequence start | - | - | ● |
| Full voltage start | - | - | ● |
| Kick start | - | ● | ● |
| Automatic pump cleaning | - | - | ● |

● = standard, ○ = option, - = not available

Case studies

Tasmanian salmon operation keeps its fish cool with ABB softstarters

Tassal upgrades the motor control center in Australia's biggest land-based salmon hatchery with ABB Softstarters, ensuring the continuous operation of its water chillers. For more information visit: [Link](#)

Lower the inrush current by 50%

Xylem - South Africa ABB softstarters providing efficiency to the mining industry

Xylem reducing the number of components by 80%, shortened installation time by 60%. Costs cut to half has helped Xylem sell twice as many panels with softstarters as before. For more information visit: [Link](#)

Total panel costs reduced by 50%

Indian tourist town is pumped up over ABB Softstarters that help uninterrupted water supply

Shimla has cut pipeline damage 50% using Softstarters to help lift water thousands of feet from a dam to quench the thirst of millions. For more information visit: [Link](#)

Pipeline damage reduced by 50%

● = included, ○ = built-in, — = not included

The PSR softstarter is the most compact of all the softstarter ranges which allows for design of a compact starting equipment.

The PSR combined with a manual motor starter makes up a far more compact starting solution than the complex star-delta starter, and with the built-in bypass, the energy losses inside the softstarter are highly reduced.

PSR

PSR – The compact range

Introduction

Technical specifications

- Rated operational current: 3...105 A
- Operational voltage: 208...600 V AC
- Wide rated control supply voltage: 100...240 V AC, 50/60 Hz or 24 V AC/DC

Features

- Two-phase controlled
- Soft start and stop with voltage ramp
- Built-in bypass for energy saving and easy installation
- Easy set-up by three potentiometers
- Run and Top of Ramp relays available for monitoring
- Connection kits available for connection to ABB's manual motor starters (MMS)

Protections

- Motor protection with manual motor starter

Communication

- Fieldbus communication with fieldbus plug adapter and fieldbus plug

Secure motor reliability

Reduce starting current

Keep the motor protected with the MMS. The PSR reduces the starting current for the motor. The possibility to connect it to the manual motor starter (MMS) makes it possible to build a compact and complete starting solution with overload and short-circuit protection.

Reduce installation time

Compact design and built in features

On the PSR, the bypass is built in and verified by ABB, saving you time during installation and space in your panel. Set-up is done through three potentiometers making it very fast and easy.

Increase productivity

Reduce mechanical stresses

Soft start and stop with PSR will reduce mechanical wear and tear on the application and increase the availability and uptime.

Motor protection with manual motor starter Combine the PSR with the MMS to achieve a complete motor starter that provides soft start and stop, along with overload and short-circuit protection.

Connection kit (optional) simplifies installation of the PSR by making the connection to the MMS screwless.

Screw or DIN-rail mounted PSR is fast and easy to install by using screw mounting or DIN-rail mounting (PSR3 ... PSR45).

Output signal relays for Run and Top of ramp (PSR25 ... PSR105).

Three potentiometers for settings Set-up is made very easy with only three potentiometers, for start ramp time, stop ramp time and initial/end voltage level.

LED indicators for On/Ready and Run/TOR (Top of ramp):

- On/Ready – green LED indicator
- Flashing – control supply
- Steady – ready to start
- Run/TOR – green LED indicator
- Flashing – ramping up/down
- Steady – TOR

Settings

1. Start = 1...20 sec

2. Stop = 0...20 sec - including the step down voltage Step down = 2% reduction for each second increased stop ramp

3. U_{ini} = 40...70% results in end voltage = 30...60%

Start and stops

PSRC is optimized for scroll compressors

Less stress and reducing maintenance cost

General information for compressors

There are different types of compressors like piston compressor, scroll compressor, screw compressor etc. Smaller compressors are often of the piston type and the load torque increases linearly with the speed. Screw compressors are often used when there is a bigger need for air flow and this type has a load torque increasing with the square of the speed. Most compressors are started unloaded and are considered to be light starts.

By using an ABB's softstarter it is possible to limit the starting torque to a level suitable for all different applications. The result is less stress on the compressor reducing the maintenance cost to a minimum. For scroll compressors, ABB has the special version PSRC that is optimized for that application.

Selection of a suitable softstarter

A compressor is usually a normal start and then the softstarter can be selected according to the motor kW size. If the compressor is a heavy duty start, the softstarter should be upsized one size. The same applies if more than 10 starts per hour are performed, upsize one size.

Features for scroll compressors

- Reduced starting current
- Short starting time (<1s) to guarantee lubrication of the compressor
- Recommended minimum starting voltage to secure a start in 400 V network
 - 200 V for smaller compressors
 - 220 V for bigger compressors

Features for the OEMs

- Easy and reliable
- 60 °C (140 °F) ambient temperature
- "Temper proof" No risk of parameters getting changed after installation

Recommended basic settings for scroll compressors:

Start ramp: < 1 sec.
 Start mode: Voltage ramp
 Stop ramp: 0 sec
 Stop mode: No ramp
 Start ramp initial level: 50%

Rhoss – Italy

Keeps air flowing

The client

Rhoss is an Italian specialist in air conditioning and air handling products and systems. For over 40 years, it has been synonymous with quality, innovation and top level service. In a recent project, where high inrush currents caused problems to the scroll compressors used to compress air, Rhoss contacted ABB for a more sustainable motor starting solution.

The challenge

Many HVAC (Heating Ventilation and Air-Conditioning) projects use scroll compressors which require short starting times. In combination with customers requiring low starting currents, this proved a challenge for Rhoss. Other challenges are high temperatures and small spaces. Italian Rhoss had experienced all of the above in previous projects and sought a solution. They needed just one single product that could handle all these challenges. ABB had an answer.

The ABB solution

Rhoss implemented ABB's softstarters in its starting equipment and were soon aware of the concept's many benefits. An integrated bypass meant the starting solution took up less space which also meant Rhoss could spend more of the space on controlling the high temperatures. The biggest benefit of all though is that the softstarter reduced the inrush currents of the scroll compressors by 60 percent while still maintaining the short starting time that this sort of application needs. The lowered starting currents mean less stress is put both on motor and compressor, reducing the need of maintenance and repairs.

**Starting currents
reduced by 60%**

PSRC

Introduction

Technical specifications

- Rated operational current: 3...105 A
- Operational voltage: 208...600 V AC
- Wide rated control supply voltage: 100...240 V AC, 50/60 Hz

Features

- Two-phase controlled
- Soft start with voltage ramp
- Built-in bypass for energy saving and easy installation
- Easy set-up
- Run and Top of Ramp relays available for monitoring
- Ambient temperature -25 to +60 °C
- Connection kits available for connection to ABB's manual motor starters (MMS)

Protections

- Motor protection with manual motor starter

Communication

- Fieldbus communication with fieldbus plug adapter and fieldbus plug

Secure motor reliability

Reduce starting current

The PSRC reduces the starting current for the motor. The possibility to connect it to the manual motor starter makes it possible to build a compact and complete starting solution with overload and short-circuit protection.

Reduce installation time

Compact design and built in features

On the PSRC, the bypass is built in and verified by ABB, saving you time during installation and space in your panel.

Increase productivity

Reduce mechanical stresses

Soft start and stop with PSRC will reduce mechanical wear and tear on the application and increase the availability and uptime.

Motor protection with manual motor starter the PSRC together with the MMS to get a complete motor starter with soft start together with overload and short circuit protection.

Screw or DIN-rail mounted PSRC is fast and easy to install by using screw mounting or DIN-rail mounting (PSRC3 ... PSRC45).

Fixed settings "Temper proof" No risk of parameters getting changed after installation.

Connection kit (optional) simplifies installation of the PSRC by making the connection to the MMS screwless.

Output signal relays for Run and Top of ramp (PSRC25 ... PSRC105).

LED indicators for On/Ready and Run/TOR (Top of ramp).

- On/Ready – green LED indicator
 - Flashing – control supply
 - Steady – ready to start
- Run/TOR – green LED indicator
 - Flashing – ramping up/down
 - Steady – TOR

| Rated insulation voltage U _i | 600 V |
| Rated operational voltage U _e | 208...600 V AC +10%/-15%, 50/60 Hz ±5% |
| Rated control supply voltage U _s | 100...240 V AC, 50/60 Hz ±5% |
| Ambient temperature | |
| during operation | -25 °C to + 60 °C (-13 to + 140 °F) ¹⁾ |
| during storage | -40 °C to + 70 °C (-40 to +158 °F) |
| Maximum altitude | 4000 m (13123 ft) ²⁾ |

¹⁾ Above 40 °C (104 °F) up to max. 60 °C (140 °F) reduce the rated current with 0.8% per °C (0.44% per °F).

²⁾ When used at high altitudes above 1000 meters (3281 ft) up to 4000 meters (13123 ft) you need to derate the rated current using one of the following formulas.
[% of I_e = 100 - (x-1000)/150] x = actual altitude for the softstarter in meters. [% of I_e = 100 - (x-3280)/497] x = actual altitude for the softstarter in feet.

The PSE has been designed to meet the most common requirements from the water segment and is specialized on pump operation. It combines the requested protections with a very compact design and built-in bypass. Remote operation with external keypad or over fieldbus is available as an option.

PSE – The efficient range

Introduction

Technical specifications

- Rated operational current: 18...370 A
- Operational voltage: 208...600 V AC
- Wide rated control supply voltage: 100...250 V AC, 50/60 Hz

Features

- Voltage ramp and torque control for both start and stop
- Two-phase controlled
- Current limit
- Kick-start
- Built-in bypass for energy saving and easy installation
- Illuminated display that uses symbols to become language neutral
- External keypad rated IP66 (Type 1, 4X,12) as an option
- Analog output for display of motor current

Protections

- Electronic overload protection
- Underload protection
- Locked rotor protection

Communication

- Built-in Modbus RTU
- Fieldbus communication with fieldbus plug adapter and fieldbus plug

Secure motor reliability

Protection and limit of current

The PSE includes the most important protections for handling different load situations that can happen to pumps e.g. overload and underload. The current limit gives you more control of the motor during start and allows you to start your motor in weaker networks.

Reduce installation time

Built in bypass and compact design

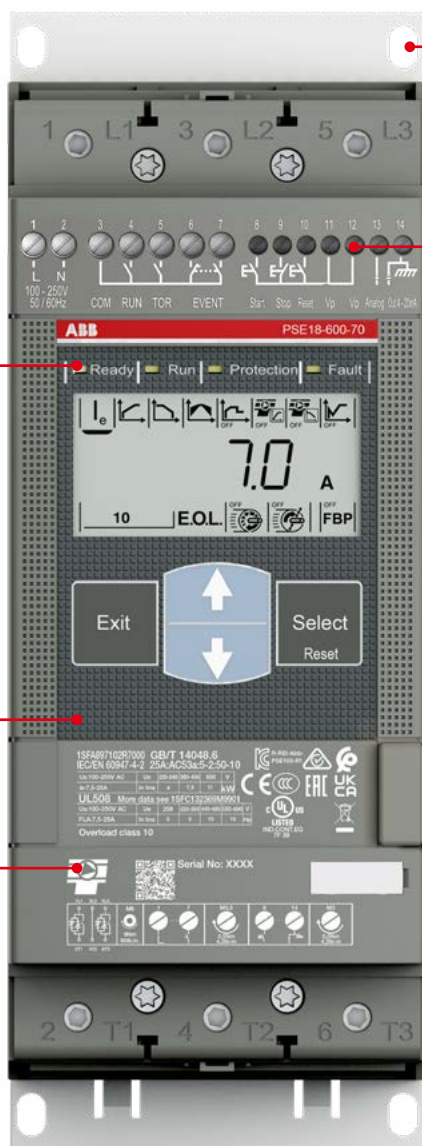

On the PSE, the bypass is built in and verified by ABB, saving you time during installation and space in your panel. The keypad is language neutral and illuminated for easy set-up and operation in field. The compact design makes installation fast and easy.

Increase productivity

Torque control with stop ramp

Torque control is the most efficient way to stop a full speed pump. The PSE has a special torque stop ramp that is designed together with a pump manufacturer to eliminate water hammering in an optimal way.

Screw mounting PSE is fast easy to install by using screw mounting.

Digital input for start, stop and reset PSE is controlled through digital inputs using the internal 24 V DC source. This allows easy control with e.g. push buttons or relays.

Three output signal relays

- 1 – Run:** indicating that the motor is running.
- 2 – TOR:** indicating that the softstarter is in top of ramp.
- 3 – Event:** indicating if there is any events present (faults, protection...). The relays can be used e.g. with pilot lights or to control a line contactor.

Coated circuit boards protecting from dust, moist and corrosive atmosphere.

Torque control function the absolutely best possible stop of pumps without water hammering and pressure surges.

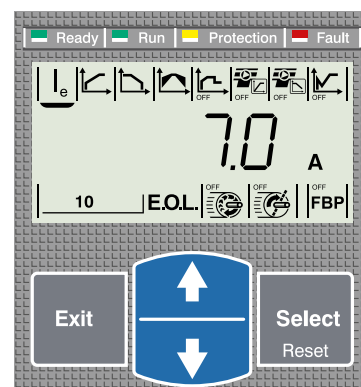

Modbus RTU fieldbus communication for monitoring and control. Support for all major communication protocols.

PSE display

Illuminated and language-neutral display with icons The display on PSE uses icons for fast and easy set-up of parameters. Each icon indicates a different parameter to set and makes navigation and setting of parameters easy.

LED indicators

- Green ready LED
Flashing – Control supply
Steady – Main power available
- Green run LED
Flashing – Ramping up/down
Steady – TOR (top of ramp)
- Yellow protection LED
- Red fault LED

| During storage | -40...+70 °C (-40...+158 °F) |
| Degree of protection | IP66 |

¹⁾ Valid for 50% on time and 50% off time. If other data is required, contact your local ABB office.

²⁾ Above 40 °C (104 °F) up to max. 60 °C (140 °F) reduce the rated current with 0.6% per °C (0.33% per °F).

³⁾ When used at high altitudes, above 1000 meters (3281 ft) up to 4000 meters (13123 ft), de-rate the rated current using the following formula. [% of $I_e = 100 - \frac{x - 1000}{150}$] x = actual altitude of the softstarter in meters.

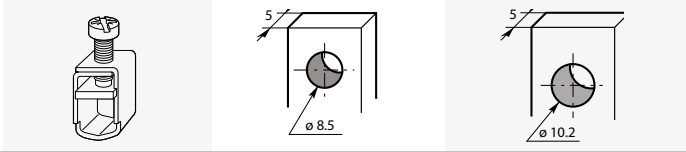

⁴⁾ A common voltage needs to be used for all 3 signal relays.

Tripping curves for the integrated electronic overload protection
PSE has an integrated electronic overload protection that can be set to four different tripping classes. Below you find a curve for each tripping class in cold state. See page 66 for bigger picture.

PSTX – The advanced range

Introduction

Technical specifications

- Rated operational current: 30... 1250 A (inside-delta: 2160 A)
- Operational voltage: 208... 690 V AC
- Wide rated control supply voltage: 100... 250 V, 50/60 Hz

Features

- Both in-line and inside-delta connection
- Detachable keypad rated IP66 (4X outdoor)
- Graphical display with 17 languages for easy setup and operation
- Built-in bypass for energy saving and easy installation
- Analog output for measurement of current, voltage, power factor etc.

Protections

- Complete motor protection

Communication

- Built-in Modbus RTU
- Support for all major communication protocols

Secure motor reliability

Complete motor protection

The PSTX offers complete motor protection in only one unit and is able to handle both load and network irregularities. PT-100, earth fault protection and over/under voltage protection along with many other functions keep your motor safer than ever. PSTX also offers three types of current limit: standard, dual and ramp. This gives you full control of your motor during start. It also allows you to use your motor in weaker networks.

Reduce installation time

Built in bypass and compact design

When reaching full speed, the PSTX will activate its bypass. This saves energy while reducing the softstarters heat generation. On the PSTX, the bypass is built in and verified by ABB, saving you time during installation and space in your panel.

Increase productivity

Complete control of pumps

Time to use your processes to their full potential. The PSTX features many application enhancing features, including torque control: the most efficient way to start and stop pumps. The pump cleaning feature can reverse pump flow and clean out pipes, securing uptime of your pump system.

Heavy duty design to handle heavy applications such as centrifugal fan, mill and mixers.

Jog with slow speed forward & reverse

The slow speed forward and backward jog feature will make you more flexible when operating e.g. conveyor belts and cranes.

Torque control function the absolutely best possible stop of pumps without water hammering and pressure surges.

The HMI is user-friendly and have a clear display that saves you time and resources during both setup and operation. The detachable keypad is standard on all PSTX softstarters with IP66 and 4x outdoor for tough environments.

Coated PCB protecting from dust, moist and corrosive atmosphere.

Customize your own specific home screens (up to seven different). The PSTX has 17 pre-installed languages. You can use your customized home screens to show status information important to your process and hide information that is not.

Detachable keypad as standard. It can be placed on your panel door, meaning you do not have to interrupt your process in order to read status information or to change settings.

Easy to learn with a large graphical display along with built-in assistants make learning how to handle the PSTX fun and simple. The interface resembles other interfaces from ABB which will streamline and help with training of field personnel.

PSTX – The advanced range

Coordination examples

Normal start In-line connected

| Softstarter | Technical data | | | | Using manual motor starter or MCCB, type 1 coordination will be achieved. ¹⁾ | Using gG fuses, type 1 coordination will be achieved. To achieve type 2 coordination, semiconductor fuses must be used. ²⁾ | Suitable switch fuse for the recommended semiconductor fuses. ²⁾ | The line contactor is not required for the softstarter itself but often used to open if OL trips ²⁾ |

¹⁾ These is an example of coordination. For more examples see: <https://applications.it.abb.com/SOC/Page/Selection.aspx>

²⁾ When using a softstarter in a network with high harmonic disturbances, we recommend to use a line-contactor. Please check the information in the Installation manual for more details.

Coordination tables (SOC) >

For more examples of coordination visit the online tool for coordination with short circuit protection, overload protection and line contactor.

PSTX – The advanced range

Technical data

| Technical data | PSTX30... 1250 |
|---|---|
| Rated insulation voltage U_i | 690 V |
| Rated operational voltage U_e | 208...600 V, 208...690V +10% / -15%, 50/60Hz \pm 10% |
| Rated control supply voltage U_s | 100...250 V +10%/-15%, 50/60Hz \pm 10% |
| Rated control circuit voltage U_c | Internal or external 24 V DC |
| Starting capacity at I_e | 4 x I_e for 10 sec |
| Number of starts per hour | 10 for PSTX30 ... PSTX370 ¹⁾ 6 for PSTX470 ... PSTX1250 ¹⁾ |
| Overload capability | Overload class 10 |
| Maximum altitude | 4000 m (13123 ft) ³⁾ |
| Ambient temperature | |
| During operation | -25...+60 °C, (-13...+140 °F) ²⁾ |
| During storage | -40...+70 °C, (-40...+158 °F) |
| Degree of protection | |
| Main circuit | - |
| Supply and control circuit | IP20 |
| Main circuit | |
| Built-in bypass contactor | Yes |
| Cooling system - Fan cooled | Yes (thermostat controlled) |
| HMI for settings (Human Machine Interface) | |
| Display | LCD type, graphical |
| Languages | Arabic, Chinese, Czech, Dutch, English, Finnish, French, German, Greek, Indonesian, Italian, Polish, Portuguese, Russian, Spanish, Swedish and Turkish |
| Keypad | 2 selection keys, 4 navigation keys, start key, stop key, info key and remote/local key |
| Signal relays | |
| Number of programmable signal relays | 3 (each relay can be programmed to None, Run, Top of ramp, Event group 0-6, Sequence 1-3 Run, Sequence 1-3 Top of ramp or Run reverse) |
| K4 | Default as Run signal |
| K5 | Default as Top of Ramp (Bypass) signal |
| K6 | Default as Event group 0 (Faults) |
| Rated operational voltage, U_e | 250 V AC/24 V DC |
| Rated thermal current I_{th} | 5 A |
| Rated operational current I_e at AC-15 ($U_e=250$ V) | 1.5 A |
| Analog output | |
| Output signal reference | 0...10 V, 0...10 mA, 0...20 mA, 4...20 mA |
| Type of output signal | Motor current (A), Main voltage (V), Active power (kW), Active power (HP), Reactive power (kVar), Apparant power (kVAh), Active energy (kWh), Reactive energy (kVAh), cos phi, Motor temperature (%), Thyristor temperature (%), Motor voltage (%), Main frequency (Hz), PT100 temperature (centigrade), PTC resistance (Ohm) |

| Control circuit | |
|--|--|
| Number of inputs | 2 (start, stop) |
| Number of additional programmable inputs | 3 (each input can be programmed to: None, Reset, Enable, Slow speed forward (Jog), Slow speed reverse (Jog), Motor heating, Stand still brake, Start reverse, User defined protection, Emergency mode (active high), Emergency mode (active low), Fieldbus disable control, Start 1, Start 2, Start 3, Switch to remote control or Cancel brake) |
| Signalling indication LED | |
| Ready | Green |
| Run | Green |
| Fault | Red |
| Protection | Yellow |
| External keypad | |
| Detachable keypad | Yes |
| Display | LCD type, graphical |
| Ambient temperature | |
| During operation | -25...+60 °C, (-13...+140 °F) |
| During storage | -40...+70 °C, (-40...+158 °F) |
| Degree of protection | IP66 (Type 1, 4X, 12) |
| Start and stop functions | |
| Soft start with voltage ramp | Linear voltage ramp, suitable for most applications |
| Soft stop with voltage ramp | Used to prolong the stop sequence |
| Soft start with torque control | Linear torque ramp, the best way to start pumps |
| Soft stop with torque control | Commonly used to reduce water hammering in pumps |
| Kick start | More power in the start for heavy duty applications. |
| Full voltage start | 0.5 second start ramp for applications with need of high starting torque |
| Sequence start | Start multiple motors with one softstarter |
| Current limit | Limits the current below a specified value |
| Dual current limit | Consist of a low level, a high level and a time between them |
| Current limit ramp | A linear increase of the current from the low to the high level |
| Torque limit | Limit the torque to between 20-200% |
| Pre-start function | Use Motor heating, Stand still brake or Jog automatically prior to start ramp |
| Jog with slow speed, forward and reverse | Run the motor in three different speeds, both forward and reverse |
| Start reverse (external contactors) | Internal logic that allows control of external contactors for reverse start |
| Dynamic brake | Provides a braking force to decrease stop time |
| Main settings | |
| Adjustable current setting | Allows to set the current from 30% to 100% of the maximum of I_e |
| Ramp time | 1...120 sec |
| Initial voltage | 10...99% |
| End voltage | 100...10% |

¹⁾ Valid for normal start (class 10) for 50% on time and 50% off time. If other data is required, contact your local ABB office.

²⁾ Above 40 °C (104 °F) up to max. 60 °C (140 °F) reduce the rated current with 0,8% per °C (0,44% per °F).

³⁾ When used at high altitudes, above 1000 meters (3281 ft) up to 4000 meters (13123 ft), de-rate the rated current using the following formula.

$[\% \text{ of } I_e = 100 - \frac{x-1000}{1000}] \times$ actual altitude of the softstarter in meter, $[\% \text{ of } I_e = 100 - \frac{x-3280}{1000}] \times$ actual altitude of the softstarter in feet. For de-rating of voltage, contact your local ABB office.

PSTX – The advanced range

Technical data

| Fieldbus connection | |
|---|--|
| Built-in Modbus RTU | Yes, with RS485 interface on terminals 23 and 24 |
| Connection for Anybus | Yes, including most common protocols, see catalog for details |
| Connection for ABB Fieldbus plug | Yes, compatible with a special adapter, see catalog for details |
| Protections | |
| Electronic overload protection, EOL | User defined, class 10A, 10, 20, 30 |
| Dual overload (separate overload for start and run) | Possible to set separate overloads for start and full speed |
| PTC connection | User defined temperature control with external PTC sensor |
| PT-100 connection | User defined temperature control with external PT-100 sensor |
| Locked rotor protection | Prevents start if motor is stuck, e.g. stuck pumps and conveyors |
| Current underload protection | Stops the process if the load is too light, e.g. a pump running dry |
| Current imbalance protection | User defined, checks current imbalance between the phases |
| Power factor underload protection | User defined, trip if power factor is out of range |
| Under voltage protection | User defined, prevents the motor from stalling in weak networks |
| Over voltage protection | User defined, prevents the motor from damage at high voltage levels |
| Voltage imbalance protection | User defined, checks voltage imbalance between the phases |
| Earth fault protection / ground fault protection | User defined, 0.1-1.0 sec, stops the process if earth fault is detected |
| Phase reversal protection | Prevents start if phases are connected in the wrong order |
| Bypass open protection | Trips if the bypass is open when it should be closed |
| User defined protection | Programmable input, can be used with external protection device |
| Too long current limit protection | User defined, trips when the current has been at the current limit for too long time |
| HMI failure protection | Indicates communication failure between softstarter and HMI |
| Fieldbus failure protection | Indicates communication failure between softstarter and PLC |
| Extension IO failure protection | Indicates communication failure between softstarter and IO module |
| Max number of starts/hour | Prevents start if the thyristors gets too warm (thus used over specification) |
| Too long start time protection | User defined, trips when the starting time exceeds a set value |
| External faults detection | |
| Phase loss | Yes |
| High current | Yes |
| Low control supply voltage | Yes |
| Faulty usage | Yes, e.g. using limp mode inside-delta |
| Faulty connection | Yes |
| Bad network quality | Yes |
| Vibration test | |
| According to IEC 60068-2-6:2007 | |

| Warnings | |
|--|--|
| Current underload warning | User defined on/off |
| Current imbalance warning | User defined on/off |
| Voltage imbalance warning | User defined on/off |
| Thyristor overload warning (SCR) | User defined on/off |
| Electronic overload Time-to-trip | User defined on/off |
| Short circuit warning (for Limp mode) | User defined on/off, for Limp mode |
| Over voltage warning | User defined on/off |
| Under voltage warning | User defined on/off |
| Power factor underload warning | User defined on/off |
| Locked rotor warning | User defined on/off |
| Faulty fan warning | User defined on/off |
| THD(U) - Total Harmonic Distortion warning | User defined on/off |
| Motor runtime limit warning | User defined on/off |
| Phase loss warning (for stand by) | User defined on/off, for stand by |
| EOL warning | User defined on/off |
| Internal faults detection | |
| Thyristor overload | Yes |
| Short circuit | Yes |
| Open circuit thyristor or gate | Yes |
| Heat sink over temperature | Yes |
| Shunt fault | Yes |
| PTC input | |
| Switch off resistance | 2825 ohm ± 20% |
| Switch on resistance | 1200 ohm ± 20% |
| Other functions | |
| Real time clock | Can maintain time when the softstarter isn't powered up, 48 h back-up |
| Event log | Log of events such as trips, parameters changed and operation |
| Emergency mode | To keep the softstarter running regardless of trip or failure. Activated via DI |
| Automatic restart | In case of trip and stopped motor, the softstarter can restart itself |
| Keypad password | Lock the keypad to inhibit unauthorized motor control |
| Pump cleaning | Can reverse pump flow and clean out pipes |
| Electronic overload Time-to-cool | Time until the motor is ready to be restarted after an EOL trip |
| Thyristor runtime measurement | Measures most electrical variables, e.g. voltage, current and power |
| Auto phase sequence detection | Detection of the phase sequence |
| Electricity metering | Measures most electrical variables, e.g. voltage, current and power |
| Motor heating | DC injection in all windings to heat up the motor. Useful in cold or humid environment |
| Stand still brake | Prevents the motor from moving, useful to keep fans from reversing |
| Voltage sags detection | User defined |
| Limp mode with two-phase motor control if one set of thyristors is shorted | Can keep process running until planned maintenance |

For all functions and features see installation and commissioning manual, available on solutions.abb.com/softstarters

| PSTX1250 ³⁾⁴⁾ | 375.0...1250.0 | 234 | 2000 | 170M6021 | 3 | 68/929 |

¹⁾ For the supply circuit 6 A delayed, for MCB use C characteristics.
²⁾ For inside delta connection the fuses shall be placed inside the delta. Contact ABB for more information.
³⁾ 170M6019 with fuse rating 1600 A should be used for 690 V version.
⁴⁾ For 690 V version, Bussmann fuses are only available for motors with rated current up to 1150 A.

Tripping curves for electronic overload protection (cold) for PSE and PSTX

Tripping curves for the integrated electronic overload protection. All units have an integrated electronic overload protection that can be set to four different tripping classes. Below you find a curve for each tripping class in cold state. These tripping curves are valid for PSTX.

²⁾ Terminal shrouds 1SFN125406R1000 can be used.

PSTX integrated bypass ratings

All ABB's softstarters are equipped with a built-in bypass contactor. This bypass contactor is rated AC-1 since it only make and break the motor in full speed at the rated current of the softstarter. However, in the PSTX470-PSTX1050 products, the bypass contactors has also a lower rated AC-3 rating which is shown in the table below.

| Softstarter | PSTX470... PSTX570 | PSTX720... PSTX1050 | PSTX1250 |
|---|--------------------|---------------------|---------------|
| Integrated contactor | AF370 | AF750 | AF1250 |
| AC-3 rating at 400 V | 370 A | 750 A | - |
| IEC AC-3 Rated operational power at 400 V | 200 kW | 400 kW | - |
| UL/CSA 3-phase motor rating at 480 V | 300 hp | 600 hp | - |

If the pull-in or holding values are Higher, the Inside Delta contactor must be controlled via an auxiliary contactor.

Fieldbus communication

For softstarters

Fieldbus communication interface offering

PSR, PSE and PSTX softstarters can be connected to a fieldbus network for monitoring and control. All major industrial fieldbus protocols are covered with different accessories making the installation very flexible.

Built-in Modbus-RTU for PSTX and PSE

- Built-in Modbus RTU communication interface
- Easy to install using the Modbus RTU adaptor which is included with the Softstarter
- Through this communication interface it is possible to get full control and status information of the Softstarter as well as reading- and writing parameters

Anybus connection for PSTX

Softstarter Selector

Easy way to select the correct softstarter

🔗 About the app

ABB Softstarter selector tool is a software created to simplify the selection of Softstarters from ABB for various applications and motors. This software will help you to find the most cost-efficient and adequate softstarter solution quickly.

[Softstarter Selector >](#)

Selecting the right softstarter has never been easier. Every installation is unique, and finding the best match between your motor, application and softstarter can sometimes be challenging. ABB offers Softstarter Selector tool with built-in smart algorithms to make the process simple. Just enter your operational voltage, power and application type to get accurate recommendations. If you go advanced by adding the actual motor and application data, you will also be able to understand the current during start, number of starts per hour and motor acceleration time.

Benefits and features

- 4 step approach to easy, fast and accurate selection
- Detailed calculation data on acceleration time and current during start
- All ABB motors are pre-installed and easy selectable in the tool
- Available in 12 different languages
- Online and offline versions
- Generate a report, add compatible accessories and check stock availability

SOC tool

Selected optimized coordination tool

A softstarter must be coordinated with short circuit protection devices (SCPD) in order to properly protect motors against “short circuits”.

The SOC tool provides coordination tables for the low-voltage equipment selection, specifically tested for IE3/IE4 motor starting and protection. Selection guidance is available for various starter types with respect to voltage, short-circuit level, starting types (Normal Start, Heavy Duty), the types of coordination required (IEC type 1 or type 2), UL Combination Motor Controller type (A to F).

The screenshot shows the SOC - Selected Optimized Coordination tool interface. It features a top navigation bar with five main categories: Motor protection, Selectivity, Back-up, Other Devices protection, and UL Component ratings. Below this is a detailed configuration table with various filters and a data table.

| Standard: | | Starting types: | | Motor Efficiency Class - Design: | | Table status: | | | |
|--------------------------------------|------------------------------|---|----------------------------------|--------------------------------------|---|---------------------------------------|--------------------------------------|------------------------------|------------------------------|
| <input checked="" type="radio"/> IEC | <input type="radio"/> UL CMC | <input checked="" type="radio"/> Normal start | <input type="radio"/> Heavy duty | <input checked="" type="radio"/> Any | <input type="radio"/> IE1/IE2/IE3/IE4 - N/H | <input type="radio"/> IE3/IE4 - NE/HE | <input checked="" type="radio"/> Any | <input type="radio"/> Active | <input type="radio"/> Legacy |
| Starter Type | Rated voltage | Motor rated power | Rated short-circuit current | Coordination type | Protection device | Overload protection | | | |
| Direct on line starter | 230 V AC | 0.06 kW | 12 kA | IEC Type 1 | Air circuit breaker | Embedded | | | |
| Star-Delta starter | 400 V AC | 0.09 kW | 16 kA | IEC Type 2 | Switch fuse | Thermal overload relay | | | |
| Soft starter (in Line) | 415 V AC | 0.12 kW | 20 kA | | Molded case circuit-breaker | Electronic overload relay | | | |
| Soft starter (inside Delta) | 440 V AC | 0.18 kW | 25 kA | | Manual motor starter | Universal motor controller | | | |
| Drive starter | 480 V AC | 0.25 kW | 30 kA | | | | | | |
| | 500 V AC | 0.37 kW | 35 kA | | | | | | |

Navigation options on the right include: Languages (Country, Language, Help, Disclaimers, Login) and Help section for a dedicated course.

Features

- More than 1800 tested and validated coordination tables available
- User-friendly selection and new smart search for fast coordination table configuration
- Optimized motor protection coordination tables for IE3/IE4 high-efficiency class with respect to N/H or NE/HE motor design
- Follow-up of the sales status of the products included inside the motor protection coordination tables
- Exporting to PDF and e-mail sharing options

Technical highlights

Adjustable rated motor current

The rated current of the motor I_e is the current used by the motor when fully loaded at full speed. The rated current is both an important selection criteria, as well as one of the most important settings.

Adjustable rated motor current makes it possible to set the motor rated current on the softstarter for the used motor. It is possible to adjust the I_e parameter from 30% to 100% of the maximum I_e value of the PSE and PSTX softstarter.

Example: PSTX30 has an adjustable rated current value from 9 A to 30 A ($30 \text{ A} \times \%30 = 9 \text{ A}$).

Inline and inside-delta connection of a softstarter

INLINE CONNECTION

This is the most common and also the easiest way to connect the softstarter. All three phases are connected in series with the overload relay, the main contactor and other devices used. The selected devices for Inline connection must be chosen to cope with the full rated motor current. The motor itself can either be star connected or delta connected.

Example:

100 A motor requires a 100 A softstarter, 100 A main contactor etc.

INSIDE-DELTA CONNECTION

The Inside Delta connection makes it possible to place the three phase controlled softstarter (e.g. PSTX) in the delta circuit and allows for a very easy replacement of existing star delta starters. When the softstarter is Inside Delta it will only be exposed to 58% ($1/\sqrt{3}$) of the in-line current. Therefore it is possible to downsize the devices in order to achieve a more cost-effective solution. However, with the inside delta connection, 6 cables are required between the softstarter and the motor, and if this distance is long, an in-line connection might be a more cost efficient solution.

Example:

100 A motor requires a 58 A softstarter, 58 A main contactor if placed in the delta circuit.

Softstarters in networks with high harmonic disturbances

When using a softstarter in a network with high harmonic disturbances, there is a risk to damage the softstarter. An example could be installations where VSDs (variable speed drives) are connected to the same transformer as the softstarter.

The harmonics are only harmful for the softstarter when it's not running the motor. To avoid problems with harmonics, either reduce the harmonics with filters on the line side or install a line contactor to switch off the line side when the softstarter isn't running the motor.

Using softstarters on a ship

ABB softstarters PSE and PSTX have marine approvals and are certified for marine environment.

Ships uses IT-networks which means that there is a floating electrical ground. It is possible to use an ABB softstarter in such a network but it is recommended to not connect the functional ground on the softstarter to the ship to avoid disturbances from the network to effect the electronics inside the softstarter.

Technical highlights

Cable length between softstarter and motor

From the softstarter perspective, there are no specific restrictions when it comes to motor cable lengths except from the implications that comes from using long cables which include the quality of the voltage, the current and the phase angle between them. An incorrect phase angle may reduce the efficiency of the motor and long cables can reduce the phase angle so that the load becomes capacitive.

PSTX can control a motor as long as the load is inductive or resistive, but not capacitive. The other thing to consider is the voltage drop that may occur when using long motor cables. A voltage drop can impact both the current draw and the motor power. The maximum allowed voltage drop should be 5%.

Using softstarters for an ATEX motor

ABB softstarter PSTX can be used to start ATEX classified motors in EX environments. However, always consult with your local ATEX certified expert for component selection and system design.

LISTED BELOW ARE SOME POINTS FOR CONSIDERATION (BUT NOT LIMITED TO):

- Locate the softstarter outside the EX area, or in an ATEX approved panel.
- The PSTX Softstarter does not have a specific ATEX approved motor overload protection. The standard (global or local) may require this depending on the type of installation. If the standard requires it an external ATEX approved EOL/ TOL should be considered.
- Select softstarter according to normal or heavy-duty start depending on your application.
- A line/fault contactor can be used in case of failure.
- Determine the short circuit coordination rating and type that is needed for the application. Typically, there should be a coordination for a device, for example a fault contactor, that won't get welded shut in case of short circuit.
- Always consult with certified ATEX expert and follow local laws and regulations that applies.
